NTE1271 Integrated Circuit Control Voltage Generator

Description:

The NTE1271 control voltage generator with three outputs is fabricated with bipolar linear technology. Two alternately exchangeable outputs are provided for two stabilized output levels controlled by an external signal. The NTE1271 is packaged in a 8-Lead SIP package with a heat radiation fin to allow for large power dissipation.

Features:

- No Need for External Components
- Three Outputs @ 8.2V typ
- Noise Protection Circuitry
- Overload Current Protection and Thermal Protection Circuitry
- Good Mountability
- High Output Current: 200mA typical for V_{O2} output
 100mA typical for V_{O0}, V_{O1} outputs

Absolute Maximum Ratings: (T_A = +25°C unless otherwise specified)

Input Voltage, V _{IN}	18V
Power Dissipation, P _D	
(T _A ≤ +70°C, No Heat Sink)	1W
(T _A ≤ +70°C, Infinite Heat Sink)	4W
Operating Temperature Range, T _{opr}	-25° to +75°C
Storage Temperature Range, T _{stg}	-55° to +125°C

Note 1. Permanent device damage may occur if the above Absolute Maximum Ratings are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of the data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Electrical Characteristics: ($T_C = +25^\circ\text{C}$, $V_{IN} = 14\text{V}$, $R_{L0} = R_{L1} = 200\Omega$, $R_{L2} = 100\Omega$ unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Input Voltage	V_{IN}		10.6	–	18	V
