## NTE1538 Integrated Circuit TV Horizontal/Vertical OSC Driver

**Description:**

The NTE1538 is a multifunctional integrated circuit in a 16-Lead DIP type package containing various functions required for synchronization, deflection of color television sets. This device has been developed under the design concept that the basic characteristics should be made more complete and the television sets incorporating the NTE1538 should be streamlined by making the device compact and by minimizing the number of parts required.

**Functions:**

- Synchronizing Separation
- Horizontal Oscillation
- Vertical Drive
- Vertical Blanking
- Horizontal AFC
- Vertical Oscillation
- X-Ray Protection

**Features:**

- Multifunctional and Compact
- Minimum Number of Parts Required
- Horizontal, Vertical Oscillators are Stable Against Variations in Ambient Temperature and Supply Voltage due to Small Warm-Up Drift.
- Small Variation in Horizontal Oscillation Frequency
- Good Linearity and Interlace because DC Bias at Vertical Output Stage is Subjected to Sampling Control within Retrace Time.
- Vertical Blanking Pulse Width can be Set Freely According to Peripheral Parts
