## NTE1627 Integrated Circuit Power Amp, 550mW, for Battery Operated Radios

### Description:

The NTE1627 is a monolithic integrated circuit in a 9-Lead SIP type package consisting of a power amplifier intended for applications such as portable radios, tape recorders, and intercoms. It operates from a supply voltage of 6V and can deliver the rated output power of 350mW (THD = 10%) to a load of  $8\Omega$ . A maximum output power of 550mW is attainable.

### Features:

- Delivers 350mW (THD = 10%) of Output Power to a  $8\Omega$  Load with 6V Operation
- Excellent Low-Voltage Characteristics (Starting Voltage < 2V)
- Housed in a Compact 9-Lead SIP Package Comparable in Size to a Preamplifier IC
- Low Current Consumption (Typically 4.8mA)

### Applications:

- Portable Radios
- Portable Tape Recorders
- Intercoms
