## NTE1749 Integrated Circuit Push-Pull Four Channel Driver

### Description:

The NTE1749 is a quad push-pull driver capable of delivering output currents to 1A per channel. Each channel is controlled by a TTL-compatible logic input and each pair of drivers (a full bridge) is equipped with an inhibit input which turns off all four transistors. A separate supply input is provided for the logic so that it may be run off a lower voltage to reduce dissipation.

### Features:

- Output Current 1A Per Channel
- Peak Output Current 2A Per Channel (Non Repetitive)
- Inhibit Facility
- High Noise Immunity
- Separate Logic Supply
- Overtemperature Protection

### Absolute Maximum Ratings:
