

NTE5655 thru NTE5657 TRIAC – 800mA Sensitive Gate

Description:

The NTE5655 through NTE5657 are 800mA sensitive gate TRIACs in a TO92 type package designed to be driven directly with IC and MOS devices. These TRIACs feature void-free glass passivated chips.

These NTE devices are bi-directional triode thyristors and may be switched from off-state to conduction for either polarity of applied voltage with positive or negative gate trigger current. They are designed for control applications in lighting, heating, cooling and static switching relays.
