NTE6236 Powerblock Module

Description:

The NTE6236 uses 2 high voltage power diodes in series and the semiconductors are electrically isolated from the metal base, allowing common heatsinks and compact assemblies to be built. This device is intended for general purpose applications such as battery chargers, welders and plating equipment and where high voltage and high current are required.

Features:

- High Voltage
- Electrically Isolated Base Plate
- 3000V_{RMS} Isolating Voltage
- High Surge Capability
- Large Creepage Distances
