

## NTE7042

### Integrated Circuit

### Bi-Directional Motor Driver

#### **Description:**

The NTE7042 is a Bi-Directional Motor Drive in a 9-Lead SIP type package and generates an output current of 700mA (Max) with 4 output modes of forward rotation, reverse rotation, stop (idling), and brake according to input logic (2 inputs). The GNDs of the logic unit and power unit are isolated. Therefore, the circuit of a reversible, variable-speed motor can be easily composed by adding an electronic governor at the output.

#### **Features:**

- Built-in Surge Absorbing Diode
- Low Standby Current
- Wide Operating Voltage Range: 4.5V to 15V
- TTL Compatible
- Built-in Thermal Shutdown Circuit

#### **Absolute Maximum Ratings:** ( $T_A = +25^\circ\text{C}$ unless otherwise specified)

Supply Voltage, $V_{CC}$ .....	18V
Output Current, $I_O$ .....	700mA
Power Dissipation, $P_D$ .....	800mW
